# RECORD OF JACKSON-PRATT OUTPUT

Call the doctor if any of the following occur:

• Fever (temperature greater than 38.0øC or 100øF)
• Significant redness of the skin where the tube comes out (a small amount of redness can be normal)
• Significant drainage from the skin around the tube site.
• Increased tenderness and swelling at the drain site.
• Cloudy, foul-smelling drainage.
• Increasing volume of drainage from the JP bulb for more than two days.

*Remember to bring your record of JP output to the doctor's office at your follow up appointment. The amount of output will decrease over time.

| DATE | TIME DRAIN EMPTIED | AMOUNT(S) | TOTAL (24HRS) |
|---|---|---|---|
| 1-1-01 | 2:00 PM | 30CC, 15 CC | 45CC |
